Schedules The product is typically run on a time-sharing basis. The product's main user interface consists of a Schedule window, with one or more drawing windows. Work from several drawings can be assigned to a schedule, by drawing window, and a time period. A drawing can be opened in multiple windows, each one assigned to a schedule. Such a window can be visible when a user is working on the drawing, and can be hidden when the user is not. History Initially, the original AutoCAD Activation Code 1.0 product ran on a time-sharing system, on an IBM PC compatible, and was available for $1495. Version 2.0 was released in 1992, and version 3.0 in 1995. The 16-bit version of AutoCAD was supported by many manufacturers. AutoCAD 3.0 included a number of improvements to the architecture and organization of drawings. It introduced several non-textual user interface components, in particular dimensions, constraints, and the dimension style dialog box. AutoCAD version 3.0 also introduced a number of new commands that made the product easier to use, and introduced a new command language. AutoCAD version 6 introduced a new command language, common user commands (CUC) and Command Manager (CM) on top of the previous command language. Version 7 added the Dynamic Input feature to allow the user to input information in the drawing by defining a script. A script is created using the AutoLISP language. In version 9, the drawing size and attributes such as Units were merged in the drawing property table. In 2006, version 11, introduced the product's new name, AutoCAD LT.
